Introduction

The WISE-4250 series is a wireless IoT solution designed for industrial applications. This Ethernet-based device is compatible with various I/O and sensors and integrates data acquisition, processing, and publishing functions. It supports real-time P2P communication between devices, enabling edge intelligence without a central controller, making it ideal for applications requiring rapid response and distributed control. Furthermore, a watchdog timer and smart roaming ensure stable device operation in any environment. The WISE- 4250 also prioritizes data security, with a data logger, data recovery function, WPA3/TLS1.3 encryption, and IP whitelisting to prevent data loss and unauthorized access. Best of all, it supports MQTT, Modbus, and RESTful APIs, enabling you to easily publish data to various cloud platforms for data-driven decision-making.

Features

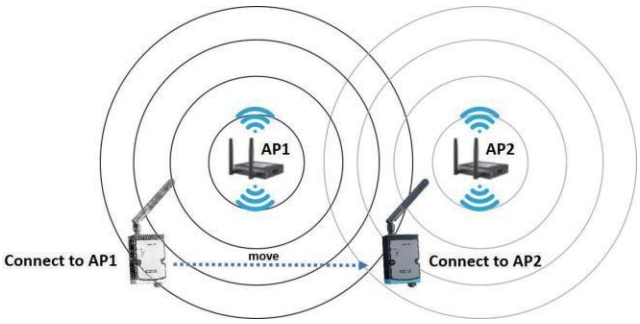
IEEE 802.11 a/b/g/n/ac 2.4/5GHz Wi-Fi with AP Mode

The Wi-Fi interface is easily integrated with wired or wireless Ethernet devices, users only need to add a wireless router or AP to extend existing Ethernet network to wireless. The limited AP mode enables the WISE-4250 to be accessed via other Wi-Fi devices directly as an AP.

Smart Roaming

Smart roaming allows WISE-4250 to dynamically connect to the most optimal access point.

With 802.11k/v/r support, the device significantly reduces connection downtime and ensures reliable wireless coverage in roaming environments.



Data Logger and Recovery

The WISE-4250 includes a built-in data logger that records over 10,000 samples with SNTP/RTC timestamps.

*Normal logging interval: 100ms

*Enhanced logging (during signal changes): 50ms

Users may configure the buffer to either overwrite oldest data (ring buffer) or stop recording when full, ensuring no data loss in mission-critical operations.

Peer to Peer (P2P)

WISE-4250 supports Peer-to-Peer communication for direct **device-to-device control without relying on SCADA or PLC systems, enabling real-time, decentralized, and low- latency responses.**

Up to 16 modules can be linked. Signals can be sent periodically or triggered by input status changes (e.g., DI/AI input triggering DO output).

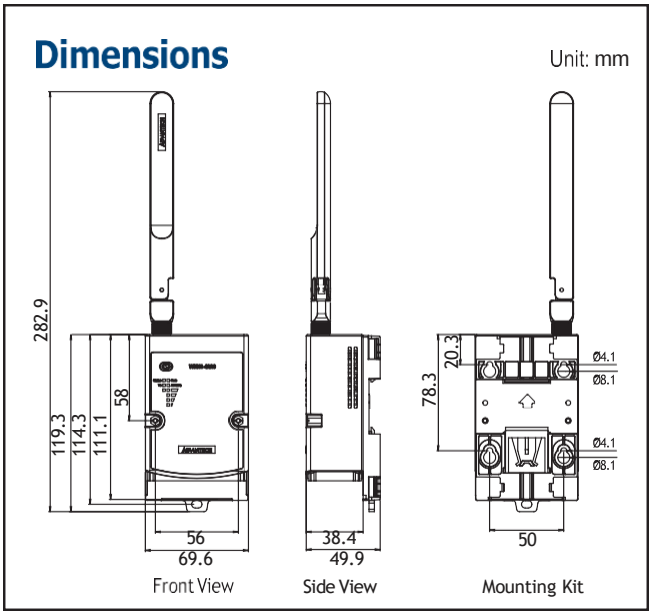
Supports two modes:

- **Basic Mode:** Fixed 1-to-1 channel mapping across modules; ideal for simple control.
- **Advanced Mode:** Flexible channel mapping for complex signal routing.

Communication uses UDP and supports AES-128 encryption for enhanced security.

RESTful Web Service with Security Socket

WISE-4250 also supports IoT communication protocol, RESTful web service. Data can be polled or even be pushed automatically from the WISE-4250 when the I/O status is changed. The I/O status can be retrieved over the web using JSON. The WISE-4250 also supports HTTPS which has security that can be used in a Wide Area Network (WAN).



HTML5 Web Configuration Interface

All configurations can be performed via an HTML5-based web interface.

This allows setup from any browser—on mobile or desktop—without requiring dedicated software tools. For best results, we recommend using Microsoft Edge.
